

NCM

DESCRIPTION

AlsterAero's Network Services Configuration Module acts as the central configuration data management server for all operational aspects of the system. All three parts of the system - InFlight Entertainment, Communication and Cabin Management are receiving their configuration and their operating system from it. Furthermore the NCM is used for software updates. The NCM is the only unit of the system that stores configuration data related to the particular installation in an aircraft. Thus, it is possible to replace other units of the system without losing its configuration data. To compensate malfunctions the NCM can be installed redundantly.

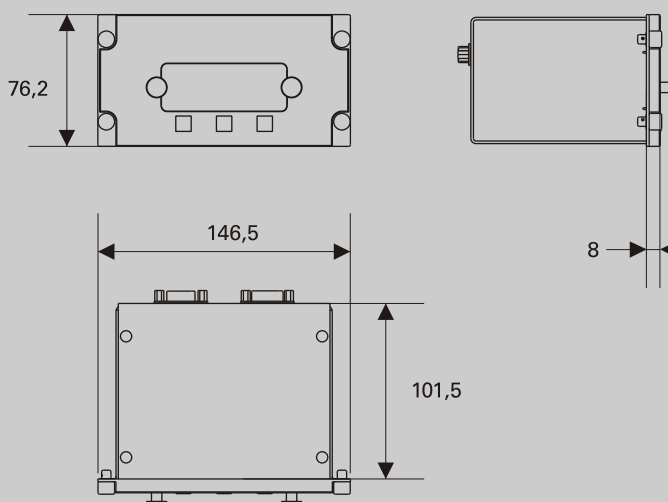

FEATURES

- centralized field loadable software storage
- centralized configuration storage
- provides automatic configuration of all connected units
- easy software update through changeable flash storage
- software update with browser based service bulletin upload
- dual NCM installation for lower failure probability

OUTLINE DRAWING

dimensions are millimeter (mm)

QUALIFICATION

- DO160
